About English Acoustics

Nestled in the heart of the west country, English Acoustics was established in the spring of 2015.

This innovative company came to fruition simply from a love for classic design and modern technology; and the realisation that we aren't the only ones with an appreciation for high end valve amplifiers and superior sound quality.

At the core of our company resonates a firm belief that British manufacturing and design are key to future success and development.

Investing in quality, value, safety and high standards also make us advocates for the other British manufacturers that not only contribute towards our products; but stand by the 'Made in Britain' collective mark with pride.

With over fifty years of combined experience in design engineering and valve audio design, our fascination with sound has been further

The Stereo 21c

The English Acoustics Stereo 21c is a modern day classic.

Exclusively British made and notably benefiting from the finest transformers along with a chassis that are both designed and manufactured in England.

Inspired by our favourite vintage amplifiers, the Stereo 21c moves forward with its contemporary design cues and safety devices fitted throughout. This means you can enjoy the warm sound that the '21c produces whilst feeling reassured that any potential risk has been considered and minimised.

We believe that good audio should be like good food: using only the finest ingredients in simple but delicious recipes. Hence, we design our own mains transformers to ensure cool silent operation and our own audio transformers to produce exceptional low-end performance together with a smooth extended top-end.

To assist with this personal decision, we have produced twelve in-house colours covering the full spectrum to help you set the tone. These colours have been affectionately devised from our own local landmarks, such as Lansdowne Gold, Marlborough Red, Avebury Grey and Cotswold Blue to name but a few.

Alternatively, you can choose bespoke colours to suit you own personal taste or corporate palette.

“ The colour choice
is only limited by
our customer’s
imagination or
the colour of
their car! ”

Peter Farrow - Founder and Chief Technical Officer

Spec sheet

Main Features include:

- Improved timeless classic design hand made in Wiltshire, England
- Automotive-grade metallic paint finish available in any conceivable colour
- Neutrik Phono Inputs
- Thermal, vibration and tilt safety cut out
- Digital LCD hour meter
- Remote power on available as an option
- World-class hand-wound transformers from local manufacturer
- Ceramic gold-plated valve sockets
- Point to point hand-wired valve sockets with lead-free silver solder
- Paper in oil capacitors

- 
- Medical grade power inlet filter
 - Custom English manufactured fixings
 - Comprehensive one year warranty

Specifications

- At least 14W per channel ultra-linear
- Less than 0.1% distortion
- SNR: Better than 90dB reference @ 10W
- Frequency response: 13Hz – 78KHz (0dB, -3dB)
- CAD designed steel chassis with laser cut details
- Transformer end-caps CNC machined from billet aluminium

A mark to be
proud of

MADE IN BRITAIN

English Acoustics is proud to support British manufacturing and export. We can confidently say every single amplifier that is branded "Made in Britain" is, as the branding suggests, is made in Britain.

We do not believe in outsourcing any manufacturing that could otherwise be done in the UK and therefore do our best to support other British based businesses. This is why all of the building and manufacturing from the chassis to the transformers is made in England to the highest standards.

We thank you for supporting us and in turn, supporting British manufacturing.

Thank you!
